

SharePoint Online connector and upcoming EOS platform deprecations in Enterprise Recon

November 2025

As we continue to develop Enterprise Recon and bring new features and extend support for more platforms and data types, we will be retiring support for outdated connectors and end-of-life systems in upcoming releases.

SharePoint Online legacy connector

On release of Enterprise Recon 2.15, expected late Q4 2025, the SharePoint Online connector will be fully deprecated. Scans attempting to use the legacy connector will fail and you will be prompted to update to the new SharePoint Online (Graph API) connector, released in Enterprise Recon 2.14.

Upcoming End-of-Support platform deprecations

The following software and platforms will be removed from Enterprise Recon in version 2.15.

Platform	Deprecated versions
macOS	• macOS 13 Ventura
Database	• Microsoft SQL Server 2012 • PostgreSQL 15 and older

The following software and platforms will be removed from Enterprise Recon in an upcoming release, later than version 2.15.

Platform	Deprecated versions
Windows desktop	• Windows 10
Windows node agents	• Windows 32-bit node agents

These changes mean that we will no longer test Enterprise Recon against these platforms. No future bug fixes will be released for deprecated platform versions.

While Enterprise Recon may continue to work with these platforms, we cannot ensure support nor guarantee their ongoing compatibility.
